DETAILED ACTION

Election/Restrictions

Applicant's election without traverse of claims 40-52 in the reply filed on 12/05/2008 is acknowledged. Currently, claims 40-52 are pending.

Specification

The abstract of the disclosure does not commence on a separate sheet in accordance with 37 CFR 1.52(b)(4). A new abstract of the disclosure is required and must be presented on a separate sheet, apart from any other text.

Information Disclosure Statement

The information disclosure statement (IDS) submitted on 09/16/08, 03/17/08, 11/30/07 and 05/22/06 are being considered by the examiner.

Claim Rejections - 35 USC § 112

The following is a quotation of the first paragraph of 35 U.S.C. 112:

The specification shall contain a written description of the invention, and of the manner and process of making and using it, in such full, clear, concise, and exact terms as to enable any person skilled in the art to which it pertains, or with which it is most nearly connected, to make and use the same and shall set forth the best mode contemplated by the inventor of carrying out his invention.

Claims 40-52 are rejected under 35 U.S.C. 112, first paragraph, as failing to comply with the written description requirement. The claim(s) contains subject matter which was not described in the specification in such a way as to reasonably convey to one skilled in the relevant art that the inventor(s), at the time the application was filed,

Art Unit: 3732

had possession of the claimed invention. No support found for "deformable in a direction perpendicular to the axis" as recited in claim 1.

Claim Rejections - 35 USC § 102

The following is a quotation of the appropriate paragraphs of 35 U.S.C. 102 that form the basis for the rejections under this section made in this Office action:

A person shall be entitled to a patent unless –

(b) the invention was patented or described in a printed publication in this or a foreign country or in public use or on sale in this country, more than one year prior to the date of application for patent in the United States.

Claims 40, 43-44 rejected under 35 U.S.C. 102(b) as being anticipated by Buchanan (5,897,316).

Buchanan discloses a dental instrument including a flexible member (fig. 16a-e and summary of the invention) having a longitudinal axis, the member is capable of being bendable along the axis and deformable in a direction perpendicular to the axis to conform to a channel having a non-uniform width; the flexible member is a shape memory member.

Claim Rejections - 35 USC § 103

The following is a quotation of 35 U.S.C. 103(a) which forms the basis for all obviousness rejections set forth in this Office action:

(a) A patent may not be obtained though the invention is not identically disclosed or described as set forth in section 102 of this title, if the differences between the subject matter sought to be patented and the prior art are such that the subject matter as a whole would have been obvious at the time the invention was made to a person having ordinary skill in the art to which said subject matter pertains. Patentability shall not be negated by the manner in which the invention was made.

Claims 42, 44, 48-52 are rejected under 35 U.S.C. 103(a) as being unpatentable over Buchanan as applied to claim 1 above, and further in view of Malmin (4,019,254).

Buchanan discloses the invention substantially as claimed except for a plurality of radially disposed elements, a cutting edge being disposed on the distal ends of the radially disposed elements and longitudinal element.

Malmin teaches an instrument having plurality of radially disposed elements, a cutting edge being disposed on the distal ends of the radially disposed elements (fig. 1-6) and a longitudinal element connected to a plurality of circumferential element. Therefore, it would have been obvious to one of ordinary skill in the art at the time of the invention was made to modify Buchanan by providing radially disposed elements as taught by Malmin in order to efficiently expand a channel or root canal. Malmin further provides abrasive surface 34 (fig. 8).

Claim 45-47 rejected under 35 U.S.C. 103(a) as being unpatentable over Buchanan in view of Malmin as applied to claim 44 above, and further in view of Abel (2003/0211442).

Buchanan/Malmin discloses the invention substantially as claimed and further discloses that the member exhibits lattice structure, except for the member having a hollow interior wall portion of the instrument

Abel teaches an instrument 400 having a hollow interior wall (fig. 6a). Therefore, it would have been obvious to one of ordinary skill in the art at the time of the invention

Art Unit: 3732

was made to modify Buchanan/Malmin by providing hollow interior as taught by Abel in order for chip removal.
